

FLOOR CARE IN COMMERCIAL AREAS:

Concentrated floor cleaner which must be diluted in water: Commercial cleaner for pre-oiled wood floor. An Aqueous derivative solution of coconut and soybean oils.

Instructions: Clean once or twice weekly using the concentrated commercial cleaner. Mix 1 part of concentrated commercial cleaner with 100 parts of water (1 cap full / 1 liter of water). The exact frequency to which you will use the concentrated commercial cleaner is hard to determine as it really depends on the traffic. However, if the floor has a tendency to be sticky, reduce the use of the concentrated commercial cleaner, but know that too much soap will not harm the floor.

Important: Regular use of the concentrated commercial cleaner will keep the characteristics of the floor finish and will therefore prolong the beauty of the pre-oiled floor.

It is important to use a well wrung mop and very little water and refrain from using any product other than those recommended by the manufacturer.
