

FLOOR CARE IN RESIDENTIAL AREA

Residential cleaner pump spray (Ready to use)

Mixture of soap vegetable wax emulsified in water and ready to use. A specific cleaning product for regular care of pre-oiled floors, which cleans and protects your floor surface.

Instructions: If the floor is very dirty, you may mop it first using only clear water and a well wrung mop (never use a lot of water) before using the residential spray cleaner. Spray the residential cleaner on a small section of the floor. Spread the cleaner evenly with a micro-fiber mop always moving lengthwise with the boards. Repeat until the entire surface has been treated. Let dry a few minutes before exposing to light traffic.

Refilling the Residential pump spray cleaner: To refill your spray bottle, use 1 part of residential concentrate to 10 parts of water.

Cleaning after installation:

Following installation of your pre-oiled floor, we highly recommend that you sweep or vacuum then mop the entire floor using only clear water and a well wrung micro-fiber mop (never use a lot of water) to remove all the dust caused by the installation prior to using our residential spray cleaner which will restore the patina effect. We recommend use of this cleaner once a month. Important: Regular use of our residential spray cleaner helps to maintain the natural characteristics of the pre-oiled wood floor. **If you must clean your floor more often, wash simply with clear water using a well wrung micro-fiber mop. If you notice a wax buildup and that markings easily appear wash simply with water for the next few weeks. Thereafter, mix 1 part of concentrated residential soap to 20 parts of water or simply use less spray cleaner on your floor.**
